- screen1 banani jis main ap ka sibf naam a rha ho ga.
- Screen2 just button + textbox
- Screen3 just button + textbox + print name

Search on :-
    Shared prefrences - [Max space, data store form, value add, fetch, remove value

Stateful widgets:

→ Used when we use dynamic things in our page.

→ Or for the things that can be modified.

Stateless widgets

→ Used when our page dont need to change anything.

→ Basically we can say when it will be static.
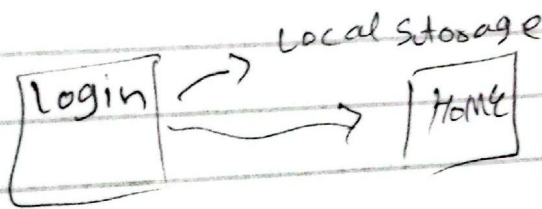

Emulators

It is a software tool that mimics the behaviour of a mobile device, allowing us to test and debug

Shared Prefrences

It is a simple key value store in Android that allows us to save and retrieve premitive Data Types.

We can say it is a local storage or chache. but has little storage capability

Local Storage

12/3
